HIGHLIGHTS

As a seasoned Lead Software Engineer, I bring a passion for startup environments and a track record of enhancing software efficiency and user experience in early-stage companies.

My expertise in technologies like Rust, Ruby and React Native, combined with leadership roles at companies like Shopify and Tier1 Financial Solutions, demonstrates my commitment to quality and innovation in dynamic, fast-paced settings.

PROFESSIONAL EXPERIENCE

Senior Software Engineer, Webisoft (Web3)

Sep 2024 - Present

Leading technical strategy and implementation of enterprise blockchain solutions, spearheading multiple high-value projects:

- Architected and delivered a Real World Asset (RWA) tokenization platform using CosmWasm, including development of a custom Rust SDK
- Designed and implemented production-grade smart contracts in Solidity for various clients, focusing on DeFi protocols and asset management systems
- Currently developing a distributed dark pool trading platform leveraging AWS and Rust, incorporating advanced order matching algorithms and real-time settlement features
- Drive end-to-end blockchain consulting services, from initial project scoping and technical documentation to implementation and deployment strategies

Senior Software Engineer, Shopify

Dec 2018 - May 2023

- Pioneered infrastructure engineering for ShopifyVM, elevating server-side web assembly efficiency across all platforms
- Overhauled the scripts editor app with Ruby on Rails and Kafka, achieving marked performance improvements
- Conducted comprehensive code reviews, upholding high-quality standards and enforcing best practices
- Played a key role in integrating Shopify POS with various physical hardware, and spearheaded the React Native development for multiple customer and internal applications
- Managed the Salesforce Platform Pod, guiding architectural decisions and ensuring the delivery of robust, maintainable code

PROFESSIONAL EXPERIENCE

Lead Software Engineer, GT Consulting

March 2019 - Present

- Provides specialized software engineering consulting services to various clients, focusing on delivering bespoke solutions
- Transitioned from a voluntary contributor to a paid professional at Open Food Network, focusing on Ruby on Rails development. My contributions significantly enhanced their food distribution platform, driving innovations and improvements in both functionality and collaborative problem-solving
- Led the development efforts at Ren, crafting advanced parenting guidance solutions by utilizing Elixir, AWS, and React Native, resulting in enhanced content delivery and improved expert accessibility
- Delivered comprehensive Salesforce and front-end solutions for BeyondTrust, enhancing their operational efficiency and customer engagement through customized CRM strategies and user-centric interface design

Lead Software Engineer, Tier1 Financial Solutions

April 2015 - Dec 2018

- Led backend architecture, focusing on RESTful web APIs for major banking clients
- Drove the transformation of the Tier1CRM mobile application, enhancing its native capabilities
- Delivered end-to-end Salesforce solutions, improving the Tier1ACE product suite
- Successfully integrated Fidelity data and developed custom solutions for key clients
- Contributed to multiple internal projects, ensuring high-quality software delivery

EDUCATION

University of Toronto, 2014

Bachelor of Applied Science and Engineering

BrainStation, 2019

Machine Learning Certification

University of Toronto, 2019

Mobile Business Technologies & Applications

Stanford Online x DeepLearning.ai, 2023

Machine Learning Specialization Certification

SKILLS AND PROFICIENCIES

Programming

React Native, Kotlin, Swift, GO, Rust, Elixir, Python, Ruby

Platform

Windows, Mac, Linux
